Evolution of Cryptocurrency

PROJECTED IN HISTORY

The first cryptocurrency created was BITCOIN in 2009. From that moment until now, the number of cryptocurrencies on the market has raised, each one of them with their own particularity.

The difference between cryptocurrencies and fiat currencies is that the virtual currencies are not regulated by any government or financial institution, their value is determined by the usability and especially by the law of supply and demand.

TRADING WITH CRYPTOCURRENCIES

The global trade, free markets, digital commerce and cryptocurrencies are marking an increasingly strong trend in financial markets. Their value is determined by the usability and especially by the Traders or Brokers that buy or sell in the Exchange platforms. The platforms of cryptocurrencies now far exceed the security of the banks, they move in levels of 9+ with platforms such as: Bitfinex, Poloniex, Bitstamp, BTC-E, etc ...
